DETAILED ACTION

This action is in response to Request for Continued Examination filed May 22, 2006 and Amendment filed April 24, 2006. Claim 1 has been amended as requested by the applicant.

Response to Arguments

Applicant's arguments, see Amendment, filed April 24, 2006, with respect to claim 1 have been fully considered and are persuasive. The rejection of claim 1 has been withdrawn. Applicant argued that the prior art fails to teach or suggest a pair of reticles that are non-coordinate geometrically with each other. The examiner agrees and the rejection has been withdrawn.

Allowable Subject Matter

Claims 1, 4-16 and 30 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claim 1, the prior art of record fails to teach or suggest a binocular telescope with a photographing function with adjustable interpupillary distance comprising a first focusing means that focuses a pair of observation optical systems, a second focusing means that focuses the photographing optical system, an association mechanism that associates the first and second

Art Unit: 2872

focusing means with each other, a pair of reticles formed on each observation optical system for focusing the observation optical systems with a predetermined dioptric power during an operation of the focusing mechanisms, each of the pair of reticle elements being arranged at an in-focus position of an objective lens system of the observation optical system, a position of an ocular lens system of the observation optical system being adjustable relative to the position of the reticle element so as to adjust the dioptric power and an interpupillary distance adjuster that adjusts the distance between the optical axes of the pair of observation optical systems wherein when the optical axes of the pair of observation optical systems are made completely coincident with the interpupillary distance of the user by using the interpupillary distance adjuster so that the reticle images of the pair of reticle elements are fused, the fused reticle images are geometrically non-coordinate with each other and form a cross.

The remaining claims depend from claim 1 and are allowable for the same reasons.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
